Date : mardi 20 janvier 2026 à 18:30 UTC-5

Foundations & Applications of Humanities Analytics (FAHA) now always available on Complexity Explorer!

The Foundations & Applications of Humanities

Analytics course aims to empower scholars in the humanities by eliminating the “black box” of computational text analysis. Participants gain a theoretical and practical understanding of text analysis methods, and learn how to extract content and derive meaning from digital sources.

This online course interweaves lectures and assignments that impart a foundational and philosophical understanding of humanities analytics techniques with those that apply this foundational understanding to real-world data sets arising in literary, cultural, and political contexts. Supplementary resources introduce the necessary steps to get started with Python programming and Jupyter notebooks, though programming skills are not taught, or required, during the course.

The NetLogo Center announces the 2026 NetLogo Conference June 29 - July 1, 2026 in Chicago, IL

The NetLogo Center is excited to announce the inaugural NetLogo Conference this summer in Chicago!

Join researchers, educators, artists, and business professionals sharing how they use agent-based modeling in their work. The conference will include research presentations, educational presentations, networking events, and

educational workshops (e.g., NetLogo + GIS, ABM + AI, designing curricula with NetLogo). Abstract/proposal submissions are now open.

Deadline for abstract/proposal submissions: March 2, 2026

Full conference details and proposal submissions here: <https://conference.netlogo.org/2026/>
